OVERVIEW

Core and Intelligence

Ziira Core runs the business. Ziira Intelligence checks it every day and tells owners what needs attention, on screen and on WhatsApp.

Ziira Core

Our ERP. Runs sales, stock, purchasing, payments, accounting, HR and payroll for every branch, and lets people act.

Ziira Intelligence

Reads the business's data, matches records against money and stock, explains what changed, and recommends what to do.

Intelligence works in two ways. It is built into Ziira Core, where it has full, live access. It also runs on its own on top of systems businesses already use: Odoo, Zoho, QuickBooks, ERPNext, POS systems, M-Pesa and bank statements. We lead in the market with Intelligence, because it needs no switching. Businesses that trust it, or have no system yet, move to Ziira Core.

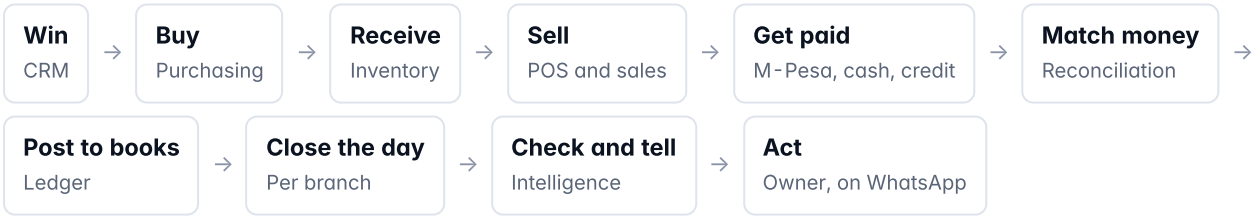

Who Ziira Core 1.0 is for

Retail and distribution businesses where staff handle money and stock while the owner is away:

- Multi-branch shops: hardware, agrovets, pharmacies, wines and spirits, mini-marts
- Distributors and wholesalers selling on credit
- Single-outlet businesses with an absent owner or high cash volume

Version 1.0 is designed for this one segment. Service and project businesses follow in 1.x.

The 1.0 business lifecycle

01 · MODULE STACK

Ziira Core 1.0: 12 modules

The first release covers how a retail or distribution business finds customers, buys, stocks, sells, gets paid, keeps its books and manages and pays its people across branches, with clean, connected data for Intelligence.

01 Command Center

The owner's front door, on screen and on WhatsApp.

- Business pulse by branch
- What needs attention
- Daily brief and alerts on WhatsApp
- Ask Ziira; approvals from the phone

02 Point of Sale and Sales

Counter sales and orders, online or offline.

- POS per branch and cashier, with till sessions
- Sales orders and simple quotations
- Returns, voids and discounts, each with a reason
- Credit sales within limits

03 CRM and Customers

Winning, keeping and managing customers.

- Leads, sources and follow-ups
- Customer profiles and history
- Credit limits, terms and statements
- Payment reminders

04 Products and Pricing

One catalogue used everywhere.

- Products, SKUs, categories, units
- Price lists by branch or customer
- Barcodes
- Tax and eTIMS item codes

05 Inventory and Branches

Stock per branch and its movement.

- Stock on hand per branch or store
- Transfers between branches
- Adjustments with reason and approval
- Stock counts; batches and expiry

06 Purchasing and Suppliers

From order to goods received and supplier bill.

- Suppliers and purchase orders
- Goods received against orders
- Supplier bills
- Cost and price history

07 Payments and Reconciliation

Matching money to sales, every day.

- M-Pesa Till, Paybill and STK push
- Cash sessions and daily branch close
- Bank deposits and statements
- Automatic matching; unmatched items flagged

08 Finance and Accounting

The books, kept automatically.

- General ledger and chart of accounts
- Invoices, receivables, payables, expenses
- Profit and loss, balance sheet, cash position
- VAT and eTIMS; accountant export

09 People, HR and Payroll

Staff, attendance and pay, posted to the books.

- Employees, departments, leave, attendance
- Payroll: PAYE, SHIF, NSSF, Housing Levy
- Payslips, P9 and statutory returns
- Salary payment by bank or M-Pesa

10 Users, Roles and Approvals

Who can do what, where, and up to what amount.

- Roles and branch-level access
- Approval limits by amount and action
- Separation of duties (create vs approve)
- Rules, notifications and escalations

11 Audit and Activity

Traceability across important actions.

- Record changes
- Approvals and overrides
- Security events
- Financial history

12 Integrations

Connection to payments and other systems.

- REST API and webhooks
- M-Pesa, banks and eTIMS
- Imports and exports (data migration)
- Accounting and POS connectors

The Command Center

The Command Center is a Core module; its intelligence comes from Ziira Intelligence. It is the first screen for owners and managers, and it also reaches them on WhatsApp.

Part	What it shows or does
Business pulse	Sales, cash received, stock, receivables, payables and expenses, per branch
What needs attention	Unmatched sales, stock losses, overdue customers, unusual voids or discounts, pending approvals
Insights	What changed and why, across sales, stock, purchasing and cash
Recommendations	What to consider doing next, with the evidence behind it
Ask Ziira	Questions in English or Swahili, on screen or on WhatsApp
Source records	From any finding to the records behind it
On WhatsApp	Daily brief, urgent alerts, answers and one-reply approvals

> **Principle:** Core supplies the records; Intelligence checks and interprets them; the Command Center brings what matters to the owner, wherever they are; Core lets them act.

What Intelligence checks in 1.0

- **Money:** sales against M-Pesa, cash and bank, per branch and cashier
- **Stock:** movements that sales do not explain; stockouts; expiry
- **Controls:** voids, refunds, discounts, price overrides and stock adjustments above normal; one person creating and approving
- **Credit:** late payers; credit given to overdue customers
- **Suppliers:** price rises not passed on; duplicate bills
- **Cash, books and tax:** weeks when payments exceed expected cash; unusual journal entries; invoices missing from eTIMS
- **People and payroll:** sales by staff absent that day; overtime trends; new names, pay changes or bank changes before payroll is approved

03 · DATA DESIGN

Intelligence-ready by design

Ziira Core is not an ERP with intelligence added later. Its data model makes daily checking possible from the first transaction.

- Every important record has a unique identifier.
- Every transaction carries a timestamp, **branch**, source, status and user.
- Every payment carries its method and **external reference**, such as the M-Pesa code.
- Voids, refunds, discounts, price overrides and stock adjustments require a **reason code**.
- **Who created** and **who approved** are recorded separately.
- Nothing is hard-deleted; cancelled records stay visible.
- Customers, suppliers, products, payments, orders and stock movements are linked.
- Stock movements connect to the sale, purchase, transfer or adjustment that caused them.
- History is retained, so Intelligence understands what is normal and what changed.
- The same structured data is exposed through APIs, so Intelligence works the same way in Core and on other systems.

Accounting and payroll

Version 1.0 includes a general ledger. Every sale, purchase, payment, expense and stock movement posts to the books automatically, so the business gets a profit and loss statement, balance sheet and VAT figures without anyone entering data twice. Accountants who prefer their own software can still receive an export.

Payroll posts to the ledger too, and its statutory deductions (PAYE, SHIF, NSSF and the Housing Levy) are kept as rate tables that can be updated when the law changes, without changing code.

Because errors here are costly, the ledger and payroll are tested heavily before launch, checked by an accountant against official calculations, and the ledger is checked daily against the Payments and Reconciliation module.

04 · SCOPE

What stays out of 1.0

Version 1.0 focuses on retail and distribution. The items below follow once Core and Intelligence are proven with paying customers.

Deferred	Why, and when
Projects and tasks	For service and project firms. Planned for 1.x.
Customer support tickets	Not core for retail. Planned for 1.x.
Manufacturing, MRP, advanced warehousing, supply-chain planning	Different customers. Not planned yet.
Recruitment, learning, marketing automation, niche verticals	Not planned yet.

Roadmap outline

Version	Adds
1.0	The 12 modules for retail and distribution, with Intelligence built in
1.x	Projects and support tickets, for service businesses
2.0	Deeper modules, such as manufacturing or advanced warehousing, if customers need them

Each step goes ahead only when paying customers ask for it.
